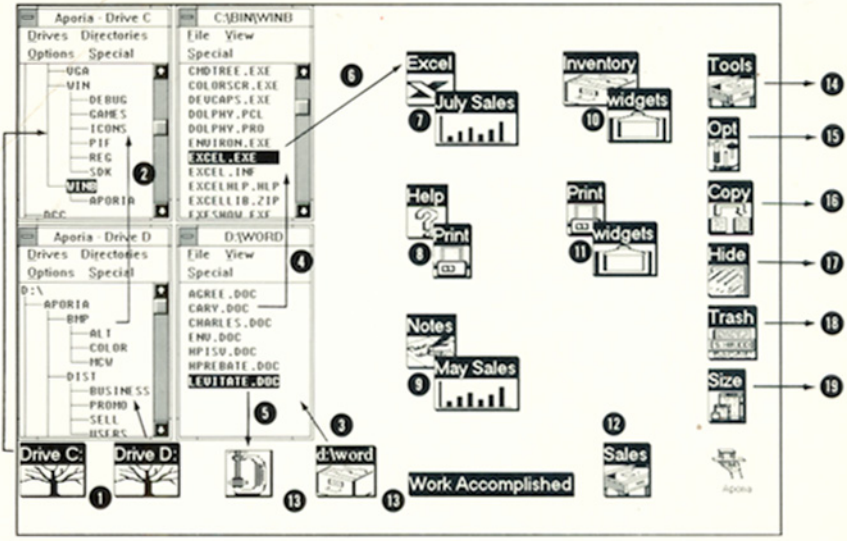
NEWTOOLS

MICROSOFT WINDOWS
Version 3.0 Compatible Product

"It's the most intriguing, innovative, exciting, and promising *Windows* shell I've seen."

Barry Simon, PC Magazine, November 27, 1990

The object-oriented application and file manager for Microsoft Windows



1. View all your drives at once with multiple tree displays.
2. Windows tile themselves for convenient access
3. Directory tools store views of directories. Click on them to quickly jump to and view files in heavily worked directories. Here we want to see only the .doc files.
4. Copy and move files by pointing and dragging them from directory to directory.
5. Drag the file "levitate.doc" off the directory window and onto the compression tool to compress the file and save disk space.
6. Pull a file off the directory and onto the desktop.
7. View July Sales spreadsheet by dropping it on Excel.
8. Get help on how to print files by dropping the print icon on the Help Tool.
9. Review your notes about May Sales by placing them on the Notes Tool.
10. Add file Widgets to your Inventory directory.
11. Print the list of Widgets by dropping them on the print tool. You make the tool so that it works on your printers.
12. Organize all your sales related tools in a Sales desk.
13. Icons can be displayed as text only, image only or both.
14. Desks store icons. Bring up all programs needed for a job with one click or automatically when Aporia starts.
15. Customize each tool.
16. Duplicate tools by dragging them on the Copy Tool.
17. Hide tools to clean up your desktop.
18. Delete files and tools, and recover mistakenly removed files.
19. Size and position windows, and change the size of icons.

Aporia provides a more convenient, flexible interface for Microsoft© Windows™. It makes Windows both more powerful and easier to use by adding a fully graphical, object-oriented, user interface. Aporia gives you complete control over your working environment. The heart of Aporia is the *tools* concept. A tool is a powerful icon that can represent an application, a file, multiple applications and files, or an entire disk drive. A tool is an intelligent object that you can train to gain complete control over how your applications run and how your files are organized.

System Requirements

Microsoft Windows 2.1 or higher.

Mouse or other pointing device.
1.2 MB 5.25" disk drive or 720K 3.5" disk drive
