

"This is one of the most useful Windows management programs I have used, far more effective than Command Post, hDC Windows manager, or any of the other Windows control programs I have seen. You're ahead of your time."

Aporia provides a more convenient, flexible interface for Microsoft Windows. It makes Windows easier and more intuitive by adding a fully graphical, object oriented, user interface. Aporia innovatively represents your work and lets you customize your working environment.

Aporia icons are not merely pretty: they are powerful tools to get your work done.

Are the icons too small? Do you want a different font? Changing them is a snap! You can even draw your own!

Do you use a set of programs and files a lot? With just a click, Aporia can display them and run them. You don't have to keep hunting for them, or re-running them by hand. Aporia can run whole sets of

programs automatically when you start Windows.

And, if you've got the screen arranged just the way you want, Aporia can remember the layout and set up the screen for you in exactly the same way, instantly.

Aporia's file management is superior. With it you can view multiple disks at once, jump to pre-selected directories, copy and move files with a click. Accidentally remove a file? Aporia can recover it for you.

And, Aporia comes with other tools and goodies: attach a note to any icon, access help for any icon, turn on the screen saver, and use the colorful icon library.

APORIA: NEW TOOLS FOR THE 90'S.

aporia

"Nice job with Aporia. You're helping me to integrate Windows in a way that ought to make Microsoft blush!"

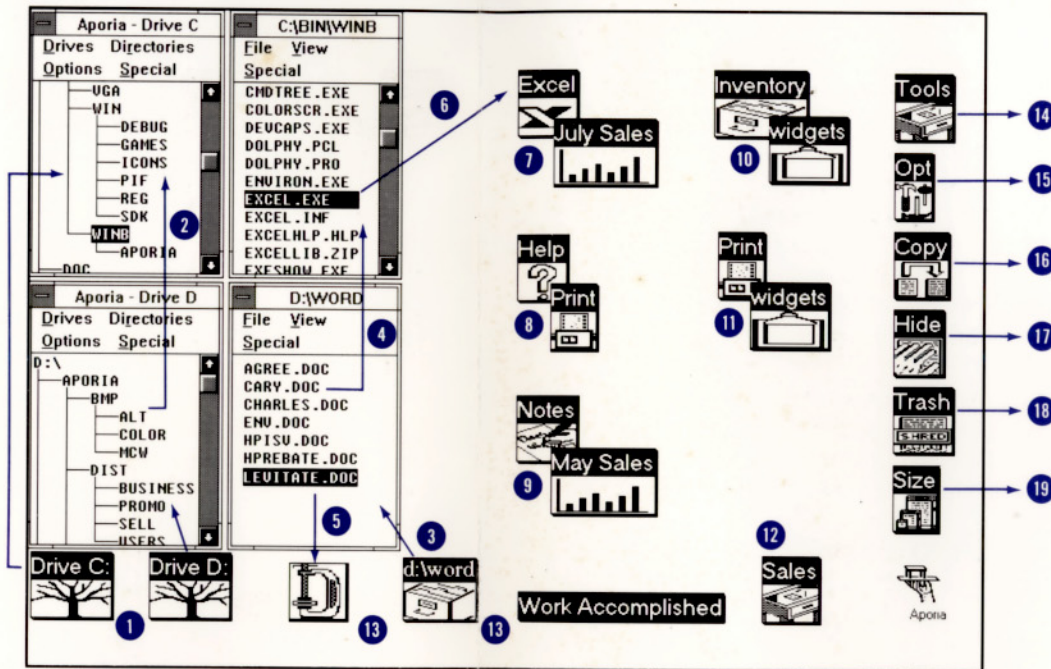

HERE'S WHAT APORIA CAN DO:

- Display multiple graphical directory trees.
- Display multiple directory listings.
- Copy, move and delete files by dragging them with the mouse.
- Copy entire sub-directory trees by dragging.
- Define "file sets": With one mouse click display all files for a given project even if they are spread over many directories.
- Complete integration of file and program management: Files can be loaded by dragging them from the directory listing window onto the icon of a program.

- Run multiple programs with one mouse click.
- Run programs or entire sets of programs on start-up.

"Greatest thing since sliced bread! Has brought me back to using Windows all the time."

- Organize groups of related programs and files all of which can be displayed, hidden or run with one action.
- Control the size and position of programs' windows.

1. View all your drives at once with multiple tree displays.
2. Copy and move directory trees by dragging them with the mouse.
3. Directory tools store views of directories. Click on them to quickly jump to and view files in heavily worked directories. Here we want to see only the .doc files.
4. Copy and move files by pointing and dragging them from directory to directory.
5. Drag the file "levitate.doc" off the directory window and onto the compression tool to compress the file and save disk space.
6. Pull a file off the directory and onto the desktop.
7. View July Sales spreadsheet by dropping it on Excel.
8. Get help on how to print files by dropping the print icon on the Help Tool.
9. Review your notes about May Sales by placing them on the Notes Tool.
10. Add file Widgets to your Inventory directory.
11. Print the list of Widgets by dropping them on the print tool. You make the tool so that it works on your printers.
12. Organize all your sales related tools in a Sales desk.
13. Icons can be displayed as text only, image only or both.
14. Desks store icons. Bring up all programs needed for a job with one click or automatically when Aporia starts.
15. Customize each tool.
16. Duplicate tools by dragging them on the Copy Tool.
17. Hide tools to clean up your desktop.
18. Delete files and tools, and recover mistakenly removed files.
19. Size and position windows, and change the size of icons.

- Create and access online help or notes for any file or program.

"This is the winner I've been looking for. Beats all the others (I've got 'em all)!"

- Select multiple tools and pass them to other tools.
- Pass parameters to tools to make Windows batch files.
- Prompt users for input when programs are run.
- Create your own icon for any tool.
- Change the size and font for all tools.
- Built in screen saver.
- Capture icons from other applications to use with your tools.
- Control the directory in which a program runs.
- Recover mistakenly deleted files.
- Create, remove, and rename directories.
- Access information on Windows' mode, memory use, and free disk space.
- Provide a consistent interface across all versions of Windows.
- Tool icons can be text only, image only or both. Change their size and their font.

"One super program for Windows!"
